

TO ALL THE ENVIRONMENTAL FIRMS

Object : Awareness campaign in the province's schools.

Laval, April 20th 2006,

Dear Madam and Sir,

On reception of your preliminary reports concerning the acid rain problem in the Quebec province, we have decided to launch an awareness campaign in our schools.

The Ministry would like to send learning material in every high school to support the campaign. This material will include a model and a demonstration device showing the combine effect of acid rain on sedimentary and igneous soil samples.

The Ministry hopes to count on your expertise to design the device and build the model. We are presently working on the specifications for the required material. You will send it to you as soon as possible.

Sincerely,

M. Gary Fisherman, Relation agent for the Ministry of Environment
