

Weighing technique with a weighing pan (WEIGHING - 1 of 3)

1- I perform the 4 basic verifications.

1- The scale is level.

2- The platter is clean.

3- The cursors are at zero.

4- The balance indicator is adjusted.

2- I gently place the weighing pan on the platter.

Weighing technique with a weighing pan (WEIGHING - 2 of 3)

3- I carefully move the cursors, one at a time, to get equilibrium again.

**4- I find the mass of my object by adding the numbers indicated by the cursors. I make a note of this mass.
(example for this photo: $0\text{ g} + 0\text{ g} + 2.4\text{ g} = 2.4\text{ g}$)**

5- I add the mass of my weighing pan to the mass of the substance to be weighed. I position the cursors on the scale to obtain this mass.

6- Little by little, I add the substance to be weighed to the weighing scale until the scale is balanced.
